

Ahmad Sarian

Full Stack Developer

Jakarta, Indonesia 2+ Years Experience

Full Stack Javascript Instructor @ Hacktiv8 Indoenesia

About

In 2016, when I was in college I just learned about programming. At first, I thought this lesson was the most frightening specter. But over time I enjoyed it, especially when I managed to run the program smoothly without errors

For me, being a programmer is not just a passion, it is Ikigai. When I do it, I am happy and always challenged. In every project that is carried out, of course, there are new problems that arise so we are required to always learn, especially with the very rapid development of technology. That's what makes programming never boring

I'm currently working as a web developer on the WebsiteOri. The language I use is JavaScript, I have experience in creating websites such as company profiles, landing pages, or web apps. Usually, the tech stack I use is JavaScript, Tailwind, PHP, SQL, Git, Vue, Laravel, and React. During my college days, I used the Linux operating system so I was very familiar with Bash scripting. I have also attended training from the government in the Digital Talent Scholarship program and I took cloud computing training from AWS.
